Professional Summary:

Motivated and detail-oriented aspiring Data Analyst with a strong foundation in cloud computing, web development, and emerging technologies. Experienced in building full-stack applications and passionate about leveraging data to drive decisions. Equipped with strong problem-solving and project management skills, and eager to contribute to real-world solutions.

Skills:

- **Programming Languages:** Java, Python, PHP, JavaScript
- **Cloud Platforms:** AWS, Azure
- **Databases:** MySQL, XAMPP
- **Other Skills:** MS Office, Networking, Blockchain Technology, Machine Learning, etc.

EDUCATION:

Bachelor of Engineering (Pursuing)

HKBK College of Engineering, Bangalore, Karnataka

Dec 2023 to ongoing

Diploma in Engineering

DVS Polytechnic, Shivamogga, Karnataka

Sep 2021 to jun 2023

Experience & Internship:

Innovant IT Solutions, Shivamogga, Karnataka

Intern | March 2023 – June 2023

- Gained hands-on experience in cloud-based application development and deployment.
 - Assisted in full-stack development tasks and collaborated on team projects.
-

Projects:

❖ Traveling Guide Web Application

Mar 2023 - Jun 2023

- Built and deployed a travel guide platform using HTML, CSS, JS, PHP, MySQL, and XAMPP.
- Designed and developed a dynamic web-based Travel Guide application to help users explore destinations, view travel information, and plan trips efficiently.
- Implemented features like destination search, user-friendly navigation, and data-driven travel details
- Managed and integrated a centralized MySQL database to store and retrieve travel-related data
- Applied cloud computing principles for scalability and potential future deployment
- Focused on responsive design and usability to enhance the overall user experience

❖ Hotel Management System

- Developed a comprehensive hotel database using SQL to seamlessly integrate guest information, room availability, and booking records for efficient management.
- Implemented an intuitive user interface that allows hotel staff to easily access and manage reservations, streamlining daily operations and enhancing user experience.
- Designed robust data models and schemas to ensure data integrity and security, facilitating efficient retrieval and manipulation of hotel data.

- Constructed various queries and reports to analyze hotel occupancy rates and revenue statistics, providing valuable insights for management decision-making.
- Documented system architecture and user manuals to support onboarding of staff and ensure smooth operation of the hotel management system.

❖ **Chatbot for Customer Service**

Jul 2024 - Dec 2024

- Developed an interactive chatbot using Java, enabling users to engage in natural language conversations with ease and efficiency.
- Designed the chatbot's conversational flow and user interface, ensuring a seamless user experience that meets customer service needs.
- Implemented natural language processing techniques to accurately interpret user queries and provide relevant responses in real-time.
- Tested the chatbot's performance through rigorous quality assurance processes, identifying bugs and refining responses for optimal user interaction.
- Analyzed user feedback and interaction data to enhance chatbot functionalities, continuously improving service quality and user satisfaction.

❖ **Portfolio Website**

- Designed and developed a clean, responsive portfolio website using HTML, CSS, and JavaScript to showcase personal projects and skills.
- Implemented dynamic navigation and auto-switching themes to enhance user experience and visual appeal.
- Integrated GitHub, LinkedIn, and Netlify for seamless project access and professional branding.
- Organized the website into key sections: About Me, Skills, Projects, Resume, and Contact for easy navigation.
- Deployed the website using Netlify, ensuring it is live, accessible, and optimized for various screen sizes.

❖ **Spurious Tattle Detection (Ongoing)**

- Developing an interactive framework for detecting fake news by leveraging advanced machine learning algorithms and natural language processing techniques.
- Implementing a multi-layered model that integrates text classification and sentiment analysis to enhance the accuracy of spurious tattle detection.

- Analyzing large datasets to identify patterns and features associated with fake news, contributing to the creation of a robust detection system.
- Evaluating the performance of various machine learning models, optimizing them for precision and recall in identifying misleading information.
- Demonstrating the effectiveness of the developed system through comprehensive testing, achieving a notable improvement in fake news detection rates.

CERTIFICATIONS:

- Google Cloud: Introduction to Image Generation, LLMs, Prompt Design, Generative AI
- Data Science 101, SQL & Relational Databases – United Latino Students Association
- Linux Tutorial Course, Network Security, Basics of Computer Networking – Great Learning
- Multiple certifications from Infosys Springboard
